```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATGGACCTGCAGCTGACCCA......GGACCACGGTCACCGTCTCC

C The present cDNA sequence codes for a claimed single-chain antibody e23

C designated e23(FY), which binds to erbB-2. Monoclonal antibody e23

C was generated by immunising mice with N/erbB-2 cells overexpressing the gpl85 protein, removing spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-erbB-2 monoclonal antibody was isolated and converted to cDNA. Regions coding for the heavy- and light- chain variable regions were then amplified by PCR and joined via a sequence encoding a peptide linker. The resulting single-chain antibody is useful for in vitro diagnosis of tumour cells which overexpress the erbB-2 gpl85 marker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours. Example; Fig 7; 37pp; English.
The source of human erbB-2 protein for the prodn. of antibodies no and 21 (Q55180/R45442; Q55181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (N/erbB-2). Abs no. 21 and 23 are directed against the extracellular domain of gp185 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs. I animals given a combination of the 2 Abs, tumours completely regressed after 11 days.

PT Inhibition of proliferation or survival of, esp. malignant erbB2, processed and binds, pref. erbB2, protein intracellularly

PT Tells - by introducing nucleic acid mol. encoding antibody homologue

PT which is expressed and binds, pref. erbB2, protein intracellularly

PS Claim 42; Page 29-30; 48pp; English.

CC A nucleic acid comprises a first sequence encoding a signal peptide

CC (R94019) linked to a second sequence (T17728) encoding a single

CC chain FV fragment (R94020) that binds a human erbB2 oncoprotein.

CC The anti-erbB2 SFV portion is obtained by PCR using e23scFV
                                                                                                                                                                                                                        T17728;

cDNA encoding an anti-gp130
Single chain Fv; scFv; antil
anti-gp130 antibody; inclusi
Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          plasmid as template. The signal peptide directs the scFv to the endoplasmic reticulum. The nucleic acid is incorporated into a plasmid or viral vector to facilitate expression of the scFv antibor homologue within e.g. an epithelial carcinoma cell. Intracellular expression of the homologue inhibits surface expression of erbB2 an thereby inhibits cell proliferation and cell survival and decreases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tumorigenicity
